

Your Hamiltonian

Any Hermitian 2×2 , 3×3
or 4×4 array, or a whole
stack of them

hamiltonians n nu

Vacuum, matter, NSI, LIV,
3+1 — the worked scenarios,
built from globaldefs

oscprob n nu

Invariants from traces
→ eigenvalues in closed form
→ coefficients u_0, u_k
→ the probabilities

fastkernels

Compiled kernels: the same
numbers, up to $12 \times$ faster

slabs

Composes the operators of
adjacent constant-density
layers, in order

earth

PREM chords, named sites
and zenith scans — it
builds the slabs
